

AeroFilm[™] BR180

Product Description

BR180 Breather Layer Cloth is a 140gsm and heavyweight 320gsm non-woven polyester/polyamide felt fabric suitable for use as a breather layer when vacuum bagging prepreg laminates or as a breather and soaker layer when vacuum bagging wet-lay laminates.

BR180 is suitable for curing temperatures up to 180°C/356°F.

Recommended Uses

- Prepreg vacuum bagging (autoclave and out-of-autoclave)
- Vacuum bagged wet-lay

Typical Use

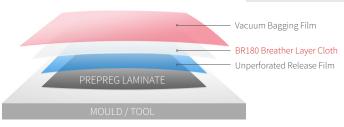

Polyester felt such as BR180 is most commonly used to ensure complete evacuation of air from within a vacuum bag (a breather layer) or to absorb excess resin from a laminate (a soaker layer). Sometimes, as in the case of vacuum bagging a wet-lay laminate, it serves both purposes.

In both of these applications, it is essential to separate the breather/soaker layer from the laminate to avoid the material from being wetted out by the resin and becoming an unremovable part of the laminate. This separation is usually provided by a release film, peel ply or both.

Breather cloth is also sometimes applied onto the back of moulds to make them less likely to accidentally puncture a vacuum bag when 'envelope' bagging whole moulds.

Following are some example consumable stacks demonstrating how breather is typically used in different processes:

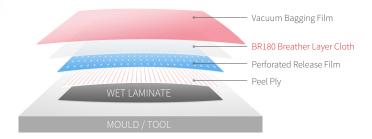

Example Stack : Prepreg Laminating

Key Features

- 180°C service temperature
- Economical
- Multipurpose
- 140gsm & 320gsm

Example Stack: Vacuum Bagged Wet-Layup

Specification

Property	Units	Value
Material	-	90% Polyester 10% Polyamide Non-woven
Width	mm	1520 (-0 +2%)
Format	-	Single Sheet
Maximum Use Temperature	°C	180
Areal Weight	g/m²	140 & 320
Appearance	-	White

Handling & Storage

BR180 is a stable polyester non-woven with no special handling or storage requirements.
